

Features

- Bluetooth wireless LED driver
- Constant voltage PWM style output with frequency up to 4kHz design compliant IEEE1789-2015
- Plastic housing with class II design
- Built-in active PFC function
- Fully encapsulated with IP67 level(except SVA and BLE type)
- Typical lifetime >50000 hrs and 5 years warranty

Applications

- LED strip lighting
- Indoor LED lighting
- LED decorative lighting
- LED architecture lighting
- Cove lighting
- Type “HL” for use in class I, division 2 hazardous (classified) location.

Description

PWM-200 IoT series is a 200W AC/DC LED driver featuring the constant voltage mode with PWM style output, which is able to maintain the color temperature and the brightness homogeneity when driving all kinds of LED strips. PWM-200IoT operates from 100~305VAC and offers models with different rated voltage ranging between 12V and 48V. Thanks to the high efficiency up to 94%, with the fanless design, the entire series is able to operate for -20°C~+85°C case temperature under free air convection. The entire series is rated with IP67 ingress protection level and suitable to work for dry, damp or wet locations. PWM-200 IoT can provide dimming level low to 0.4% suitable for low light level applications e.g. cinema. The output frequency is up to 4kHz which compliant to IEEE1789-2015 requirement for no risk providing a great solution for health concern due to light flickering.

NOTE

- All parameters NOT specially mentioned are measured at 230VAC input, rated current and 25°C of ambient temperature.
- Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time.
- De-rating may be needed under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details.
- The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.
(as available on https://www.meanwell.com/Upload/PDF/EML_statement_en.pdf)
- This series meets the typical life expectancy of >50,000 hours of operation when Tcase, particularly (C) point (or TMP, per DLC), is about 75°C or less.
- Please refer to the warranty statement on MEAN WELL's website at <http://www.meanwell.com>
- The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
- For any application note and IP water proof function installation caution, please refer our user manual before using.
https://www.meanwell.com/Upload/PDF/LED_EN.pdf
- It is not recommended to connect to capacitive loads.
- The dimming memory function of TY1 type needs at least 5 seconds to complete.
- The matching mode of TY1 type is on-off-on-off-on by AC or DC power.
- To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently connected to the mains.

■ DIMMING OPERATION

※ **Dimming principle for PWM style output**

• Dimming is achieved by varying the duty cycle of the output current.

$$\text{Duty cycle(\%)} = \frac{T_{ON}}{T} \times 100\%$$

Output PWM frequency : up to 4KHz

※ **Bluetooth control**

- To be used through APP available on Apple Store and Google Play Store for iOS and Android.
Search: BLE with Casambi/TY1 with Smart Life/SVA with Silvrair/WZ1 with WiZ
Example:

The APP for BLE type is "Casambi"

The APP for TY1 type is "Smart Life"

The APP for SVA type is "Silvrair"

The APP for WZ1 type is "WiZ CN"

CASAMBI

The real time Bluetooth IC temperature is shown in the APP. In case it reaches above 65 °C (equivalent to Tc 80°C), the driver will be turn off to provide a protection. In case the units is cooled down, it can be manually turn ON and back to normal operation again.

NOTE: 1.This software temperature protection is an extra independent function from driver its own hardware over temperature protection(when it is enabled, it needs re-AC power on to recover).

2.In general the software temperature protection is triggered before the hardware one when in over temperature.

Adding new device:

1. Install the app on the mobile device.Please go to the App Store for iOS or Google Play for Android, and search for "Smart Life" to download.

2. Turn on the phone's Bluetooth and open the "Smart Life" app.
3. Register an account. Register an account to be able to use the dedicated application.
If you have already registered an account, please enter your country/region, account and password to login.

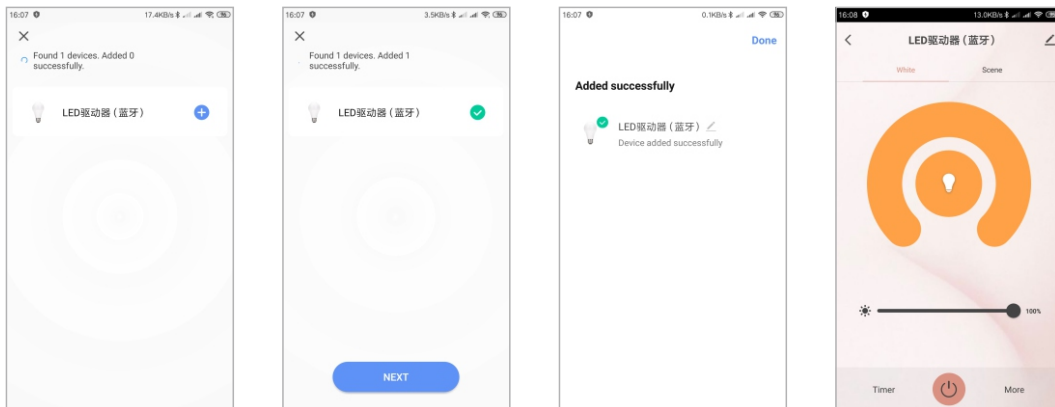

4. Click "Add Device" and select "Light Source(BLE)" from the lighting type.

5. Reset the device. Please follow the 3 steps in the diagram to complete the setup.

6. Wait for the system to search for the device and connect it. When the steps are finished, click "Done" to connect successfully.

◎ **Cautions**

- Before commencing any installation or maintenance work, please disconnect the power supply from the utility. Ensure that it cannot be re-connected inadvertently!
- Keep proper ventilation around the unit and do not stack any object on it. Also a 10-15 cm clearance must be kept when the adjacent device is a heat source.
- Mounting orientations other than standard orientation or operate under high ambient temperature may increase the internal component temperature and will require a de-rating in output current.
- Current rating of an approved primary /secondary cable should be greater than or equal to that of the unit. Please refer to its specification.
- For LED drivers with waterproof connectors, verify that the linkage between the unit and the lighting fixture is tight so that water cannot intrude into the system.
- Tc max. is identified on the product label. Please make sure that temperature of Tc point will not exceed limit.
- Suitable for indoor use or outdoor use without direct sunlight exposure. Please avoid immerse in the water over 30 minutes.
- The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.
